Data Collection Worksheet

> **Please Note:** The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

The EQ-5D-3L self-reported questionnaire includes a descriptive system and the EQ visual analogue scale (EQ VAS). The descriptive system comprises five dimensions:

- Mobility
- Self-Care
- Usual Activities
- Pain/Discomfort
- Anxiety/Depression

Each dimension has three levels:

- No problems
- Moderate problems
- Extreme problems

For the descriptive system, the respondent is asked to indicate his or her health state by marking the most appropriate statement in each of the three dimensions. This decision results in a one-digit number expressing the level selected for that dimension. The digits for three dimensions can be combined in a three-digit number describing the respondent's health state.

The visual analogue scale records the respondent's self-rated health on a 20 cm vertical, visual analogue scale with endpoints labeled "the best health you can imagine" and "the worst health you can imagine." This information can be used as a quantitative measure of health, as judged by the individual respondents.
